

# Exercise: **Advanced** Modelling

5. Model states 'test' and 'verify' for the web server
  - Verify the 'running' and 'enabled' state  
`tasks/verify.yml`
  - Verify any configured state  
`tasks/verify.yml`
  - Update the webserver or change it to nginx  
`tasks/upgrade.yml`
  - Create a role skelton having desired state boilerplate

# molecule **verify**

```
$ vim molecule/default/verify.yml
```

```
---
```

```
- name: Verify
  hosts: all
  gather_facts: false
  vars:
    role_name: "{{ lookup('env', 'MOLECULE_PROJECT_DIRECTORY') | basename }}"
  tasks:
    - name: "Include web"
      ansible.builtin.include_role:
        name: "{{ role_name }}"
        tasks_from: verify
```
