## Creating a Role

- 1. Initialize a role named 'httpd'
  - Explain what was created
- 2. Install the httpd package
  - Use the 'package' module
  - Run 'molecule converge'
  - Discuss what happened
- 3. Launch the web server in a handler
  - Run 'ansible-doc systemd' for help
  - Verify it

## ANSIBLE

## GALAXY

```
a role/
Jenkinsfile
                      # continuous integration pipeline
                      # documentation
README.md
defaults
 — main.yml
                      # default variables that can be overridden
                      # files and scripts to be transferred
files
handlers
 └── main.yml
                      # the actions that respond to change notifications
meta
