Playbook Example

```yaml
#!/usr/bin/env ansible-playbook
---
# Usage: ./motd.yml -l web -i <inventory>

- name: Distribute message of the day
  hosts: all
  become: true
  gather_facts: false

  tasks:

    - name: Copy motd from files
      ansible.builtin.copy:
        src: motd
        dest: /etc/
        owner: root
        group: root
        mode: '0644'
```
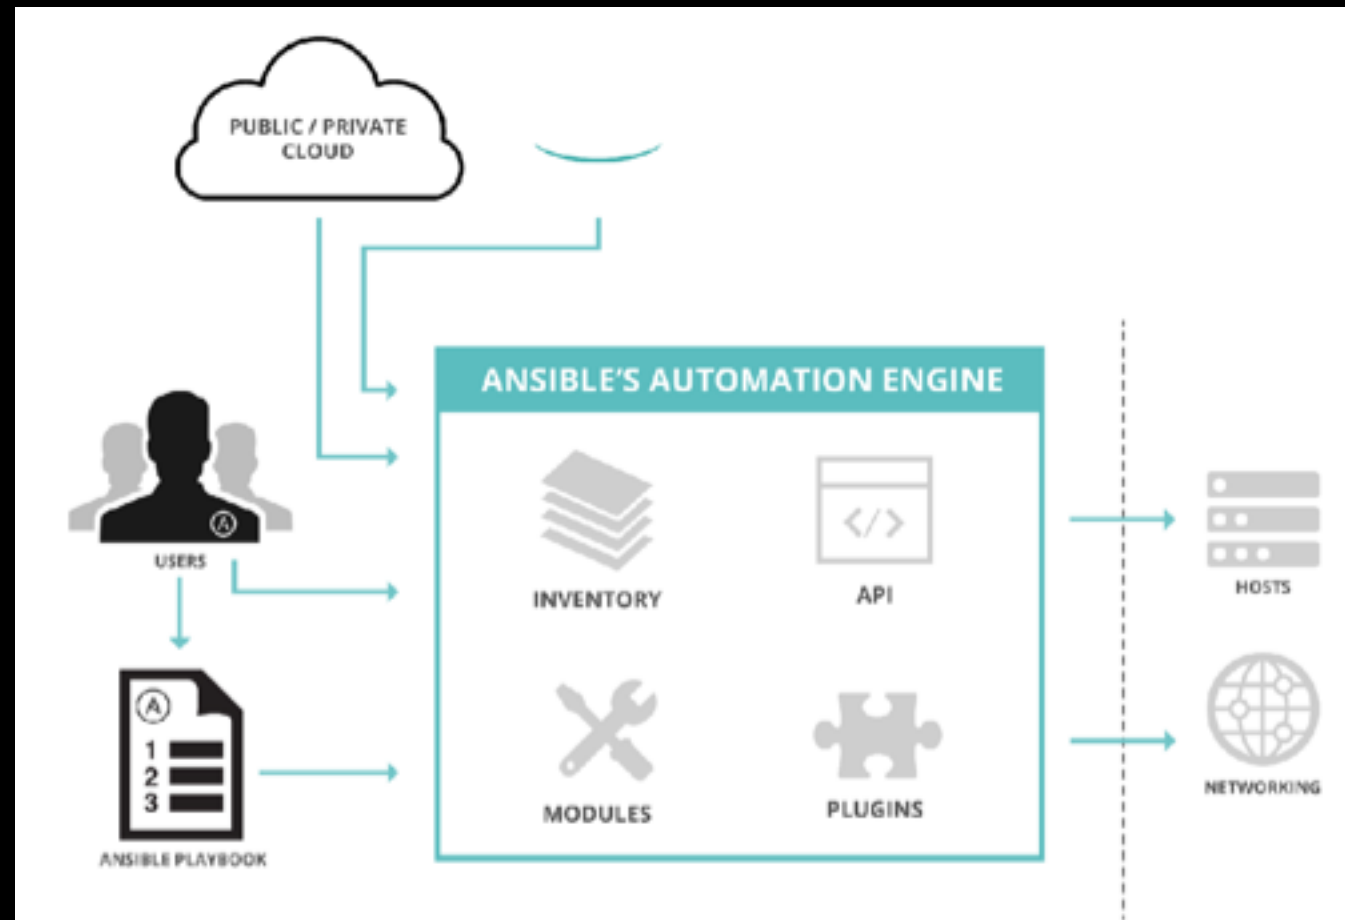

How **ansible-playbook** works

- **ansible-playbook** copies and executes modules with the parameter values specified in the task's YAML to the **inventory** host(s)

results are color coded in the logs
[ok] [changed] [skipped] [fatal]
