ANSIBLE GALAXY

Activity

Configure Ansible Skeleton

```
mkdir -p ~/git
cd ~/git
git clone https://github.com/playingfield/ansible_skeleton.git

# Edit user ansible.cfg
vim ~/.ansible.cfg

# You have to add the following lines:

[galaxy]
role_skeleton = ~/git/ansible_skeleton/role
role_skeleton_ignore = ^.git$,^.*/.git_keep$
```

Creating a Role

1. Initialize a role named 'httpd'
   - Explain what was created

2. Install the httpd package
   - Use the 'package' module
   - Run 'molecule converge'
   - Discuss what happened

3. Launch the web server in a handler
   - Run 'ansible-doc systemd' for help
   - Verify it
